

## How can you boost the IQ of your machine designs?

Thomson can help you increase the intelligence of your linear motion systems to **improve controllability and reduce complexity and overall costs**. The technology behind **industrial linear actuation** has been adapting to Industry 4.0, thereby:

- Introducing the “smart factory.”
- Reshaping how machine designers approach their work.
- Opening up new opportunities for actuation in a multitude of markets and applications.

Utilize any of the following **smart actuation resources** to get started:

### Meet even the most demanding applications with AquaTRUE™

#### Revolutionary, corrosion-resistant and water-tight gearheads

Perfect for food and beverage handling, packaging and dispensing, AquaTRUE gearheads can be placed anywhere in your application's design, regardless of environmental factors.

Additional features and benefits include:

- No external seams
- IP66/IP67 and IP69K protection on both input/output
- No areas of ingress
- 300 Series stainless steel
